

LASER & SKIN SURGERY CENTER OF RICHMOND

IMPORTANT INFORMATION

Mohs' Surgery Patient

All Mohs' surgeries begin in the morning. Dr. Fisher will take tissue from the area of concern, stain it and examine it under the microscope. The staining process takes approximately 45 minutes each time. Dr. Fisher may need to perform this process multiple times until the tissue margins are clear of cancer.

We ask for your patience during the process – Dr. Fisher will not know how extensive the cancer is until he begins the surgery. The suggestions below are for your comfort throughout the day:

- Bring your insurance card and identification
- Eat as you normally would before coming to your appointment
- Take all medications as prescribed
- Please plan on being at our office all day
- Bring a lunch/snack
- Bring a book, laptop, I-pod, cards
- Bring a sweater
